

ATV MOUNTED TREE SHEAR
ABSTRACT OF THE DISCLOSURE

The present invention is a vegetation cutting apparatus for connection to an all terrain vehicle. A frame attaches to the front grill of the all terrain vehicle. Specifically, a first frame member attaches to the front grill while a second frame member, which extends forward relative to the all terrain vehicle, attaches to the first frame member. A shear attaches to the forward end of the second frame member. A hydraulic system actuates the shear to perform the cutting of vegetation.
